

GT-CP Sales Demo Image Instructions

Image Locations in FROM2

In order for the included sales demo to work properly, the seven images that were included in the “Sales_Demo/Images” folder must be saved to the GT-CP’s FROM2 at the following addresses:

Image Name	FROM2 Address
Paint	0x00000000
Keypad	0x000c0000
Photo	0x00180000
Menu	0x00480000
GTCP_3_edit	0x003c0000
GTCP_1_edit2	0x00240000
GTCP_2_edit	0x00300000

This can most easily be done with our “GT Packer” application available [here](#).

Image Upload Procedure

1. **Connect** your GT800X480A-C903PA module to your PC via micro USB.
 - a. Make sure JP1 is **closed** so the module receives power via USB.
 - b. **Verify** that your USB port is capable of providing sufficient current to the module.
Check your module’s hardware datasheet for its required current.
2. **Launch** “GT Packer”.
3. **Select** the port that your GT800X480A-C903PA module is using.
4. **Click** on the “File >> Disp” button.
5. **Select** the “GTCP_Sales_demo.bin” file (located in the Images folder) and **click** “Open”.
Also, make sure that the “GTCP_Sales_demo.txt” file is in the **same** folder.
6. The **tool** will **load** the **images** onto the module’s **FROM2**. This operation is **completed** when the **progress bar is full** and the **Map section changes** to reflect the images that were loaded.
7. You can **check** to see if the images were loaded properly by **double-clicking** on the **image name** in the **Map file section**. This action will **“recall”** the image from FROM2 and **display** it on the attached **module**.
8. Now your module is ready to run the sales demo!
